

DESCRIPTION

TREATING METHOD FOR SUPPRESSING HAIR GROWTH

Technical Field

5 The present invention relates to a treating method and a dermatologic composition for external use, each for suppressing hair growth.

Background Art

10 Although the body hair serves to biologically protect important organs such as head, chest, hands and feet, the organ-protecting function of the hair is losing its importance with the appearance and development of protecting means such as clothes and protectors.

15 The hair was so far desired to be abundant. In recent years, however, the hair, particularly, that of hands and feet tends to be undesired from the aesthetic viewpoint. To meet such a tendency, various body hair removing methods have been developed and utilized. Specific examples
20 include a mechanical removing method using a shaver, hair-tweezers or the like and, a method of rooting up the hair by using a depilatory and a method making use of the chemical action of a hair removing agent (EP-622069A1, WO97/44005).

25 These hair removing methods however give a physical or chemical stimulus to the skin. In addition, their effects

do not last permanently, though there is a little
difference in durability among the methods, which needs the
hair removing treatment again after the passage of a
predetermined time. There is accordingly a demand for
5 reducing the frequency of the hair removing treatment.

An object of the present invention is therefore to
provide a treating method for hair growth inhibition which
method is capable of effectively suppressing the growth of
the body hair, thereby decreasing the removing frequency of
10 the body hair.

Disclosure of the Invention

The present inventors have carried out an extensive
investigation. As a result, it has been found that a
15 specific plant extract has excellent hair growth inhibitory
effects and a dermatologic composition for external use
which comprises it is useful as a hair growth inhibitor.

In one aspect of the present invention, there is thus
provided a treating method for hair growth inhibition,
20 which comprises administering an extract of the plant
belonging to the family of *Juniperus* or a malt extract.

In another aspect of the present invention, there is
also provided a dermatologic composition for external use,
which comprises (A) an extract of the plant belonging to
25 the family of *Juniperus* or a malt extract, (B) an elastase
inhibitor or neutral endopeptidase inhibitor.

In a further aspect of the present invention, there is also provided a dermatologic composition for external use, which comprises (A) an extract of the plant belonging to the family of *Juniperus* or a malt extract, (B) an elastase inhibitor or neutral endopeptidase inhibitor, and (C) at least one proteolytic enzyme selected from the group consisting of papain, trypsin, chymotrypsin, pepsin, bromelain, ficin and pancreatin.

In a still further aspect of the present invention, there is also provided a dermatologic composition for external use, which comprises (B) an elastase inhibitor or neutral endopeptidase inhibitor, and (C) at least one proteolytic enzyme selected from the group consisting of papain, trypsin, chymotrypsin, pepsin, bromelain, ficin and pancreatin.

In a still further aspect of the present invention, there is also provided a treating method for hair growth inhibition, which comprises administering a composition containing the above-described components (A) and (B), a composition containing the above-described components (A), (B) and (C), or a composition containing the above-described components (B) and (C).

Best Modes for Carrying Out the Invention

Examples of the plant belonging to the family of *Juniperus* and usable in the present invention include

Juniperus communis, Juniperus virginiana L., Juniperus
morrisonicola Hayata and Juniperus formosana Hayata. Of
these, Juniperus communis and Juniperus virginiana L. are
particularly preferred. These plants of the family of
5 Juniperus are preferably extracted at the leave or fruit
portion thereof.

As a malt, that of wheat, barley, rye or oats is used.

The term "extract of a plant" as used herein means a
solvent extract available by extracting the above-described
10 portion of the plant in a solvent or through an extracting
device such as Soxhlet extractor, or its dilute solution,
concentrate or dry powder.

Examples of the solvent used for extraction include
water, alcohols such as methanol, ethanol, propanol and
15 butanol, polyhydric alcohols such as polypropylene glycol
and butylene glycol, ketones such as acetone and methyl
ethyl ketone, esters such as methyl acetate and ethyl
acetate, linear or cyclic ethers such as tetrahydrofuran
and diethyl ether, halogenated hydrocarbons such as
20 dichloromethane, chloroform and carbon tetrachloride,
hydrocarbons such as hexane, cyclohexane and petroleum
ether, aromatic hydrocarbons such as benzene and toluene,
polyethers such as polyethylene glycol, and pyridines.
They may be used either singly or in combination.

25 From the above-described extract, inactive impurities
can be removed by a technique such as liquid-liquid

partition or solvent-adding precipitation. In the present invention, it is preferred to use such a purified extract. If necessary, the extract may be used after deodorization or decoloring in a known manner.

5 Although there is no particular limitation imposed on the form of the hair growth suppressing composition of the present invention, it is preferred to formulate it as a hair-removing, depilatory or shaving cosmetic composition. Specific examples of such a cosmetic composition include
10 hair removers in the form of a paste, cream or aerosol, depilatories in the form of a wax, jelly or sheet, agents in the form of a lotion or cream used for treatment after hair removal or depilation, pre-shaving agents such as pre-shaving lotion, shaving agents such as shaving cream, and
15 after-shaving agents such as after-shaving lotion.

The above-described effective component is preferably contained in the hair growth inhibiting composition of the present invention in an amount of 0.00001 to 50 wt.%, particularly 0.0001 to 10 wt.%, as a dry solids content,
20 from the viewpoints of the hair growth inhibitory effects and economy.

In the present invention, it is possible to use, together with the component (A), an elastase inhibitor and/or neutral endopeptidase inhibitor (B) and by using
25 them in combination, the resulting dermatologic composition for external use has more improved hair growth inhibitory

effects.

The "elastase" as used herein means one of proteolytic enzymes which are presumed to play an important role for metabolism in the tissues of the living body. It is known that the neutrophilic elastase closely relates to the protection from infection or decomposition and regeneration of the damaged tissue, while the dermal-fibroblast-derived elastase takes part in the aging of the skin. The term "elastase inhibitor" as used herein embraces respective substances having inhibitory activity against these elastases. Particularly preferred are substances inhibiting dermal-fibroblast-derived elastase, for example, those exhibiting inhibitory activity of at least 50% in the concentration of 1 mM in an enzyme activity measuring system which contains an enzyme solution extracted from cultured human fibroblast with 0.1% Triton X-100/0.2M tris-HCl buffer (pH 8.0) and, as a substrate, N-succinyl-Ala-Ala-Ala-p-nitroanilide.

Examples of such an elastase inhibitor include (1) phosphonic acid derivatives as described in Japanese Patent Application Laid-Open No. HEI 10-324611, (2) mercaptopropionic amide derivatives as described in Japanese Patent Application Laid-Open No. HEI 10-265360, and (3) plants selected from ginger rhizome, hydrolyzed almond, birch, clove, rose hip, hawthorn, white birch and gambir or extracts, steam distillates or pressed products

thereof.

The above-described phosphonic acid derivatives mean the phosphonic acid derivatives represented by the following formula (1):

(wherein, R¹ represents a hydrogen atom, a hydroxyl group, a substituted or unsubstituted hydrocarbon group or a substituted or unsubstituted saccharide residue, R² represents a hydrogen atom, a substituted or unsubstituted hydrocarbon group or a substituted or unsubstituted saccharide residue, and R³ represents a hydrogen atom or -CH(R⁴)COOH (in which, R⁴ representing a hydrogen atom or a substituted or unsubstituted hydrocarbon group), or salts thereof.

As the substituted or unsubstituted hydrocarbon group represented by R¹, R² or R⁴ in the above-described formula (1), either a saturated hydrocarbon group or an unsaturated hydrocarbon group can be used and examples include alkyl, alkenyl, alkynyl, cyclic alkyl, cyclic alkenyl, aromatic hydrocarbon and aralkyl groups. These hydrocarbon groups each preferably has 1 to 24 carbon atoms, particularly 1 to 18 carbon atoms.

Among the above-exemplified hydrocarbon groups, alkyl, cyclic alkyl, aromatic hydrocarbon and aralkyl groups are

10067944-020892

preferred. Preferred examples of the alkyl group include linear or branched C₁₋₁₂ alkyl groups, with n-propyl, isopropyl, n-butyl, isobutyl, tert-butyl and isoamyl groups being more preferred. Preferred examples of the cyclic alkyl group include 5- to 7-membered alicyclic alkyl groups, with cyclopentyl and cyclohexyl groups being more preferred. Preferred examples of the aromatic hydrocarbon group include C₆₋₁₄ aromatic hydrocarbon groups such as phenyl and naphthyl. Preferred examples of the aralkyl group include C₁₋₅ alkyl groups each substituted with a C₆₋₁₂ aromatic hydrocarbon group, such as 2-phenylethyl (=phenethyl), 2-(1-naphthyl)ethyl and 2-(2-naphthyl)ethyl groups.

Examples of the group substitutable for these hydrocarbon groups include halogen atoms, a hydroxy group, alkoxy groups, acyl groups, protected or unprotected amino groups and heterocyclic groups. Examples of the halogen atom include chlorine, bromine and iodine. As the alkoxy groups, C₁₋₁₂ alkoxy groups such as methoxy, ethoxy and isopropoxy are preferred. As the acyl groups, C₁₋₁₂ alkanoyl groups such as acetyl, propionyl and butyryl groups are preferred. Examples of the protected or unprotected amino groups include amino, acylamino, alkylamino and dialkylamino groups. As the heterocyclic group, preferred are 5- to 14-membered monocyclic or fused cyclic groups having 1 to 3 hetero atoms such as nitrogen,

oxygen and/or sulfur, for example, pyridyl, pyridazinyl, furyl, thienyl, indolyl, thiazolyl, imidazolyl, benzofuryl and benzothienyl groups.

Examples of the saccharide residue include monosaccharide residue and oligosaccharide residue. Examples of the group substitutable for these saccharide residues include alkyl, acyl and aralkyl groups. As the alkyl, acyl and aralkyl groups, those exemplified above can be mentioned.

These phosphonic acid derivatives can be prepared, for example, in accordance with the process as described in Japanese Patent Application Laid-Open No. HEI 5-105698.

The above-described mercaptopropionic amide derivatives mean mercaptopropionic amide derivative represented by the following formula (2):

(wherein, R⁵ represents a hydrogen atom or an acyl group, R⁶ represents a hydrogen atom or a substituted or unsubstituted hydrocarbon group, R⁷ represents a hydrogen atom, a carboxyl group, an alkoxycarbonyl group, a substituted or unsubstituted hydrocarbon group, a substituted or unsubstituted heterocyclic group or an acyl group and n stands for 1 to 20) or salts thereof.

As the acyl group represented by R⁵ or R⁷ in the above-described formula (2), alkanoyl groups and

arylcarbonyl groups can be mentioned. As the alkanoyl groups, C₁₋₁₂ alkanoyl groups such as acetyl, propionyl and butyryl groups are preferred, while as the arylcarbonyl groups, C₇₋₁₅ arylcarbonyl groups such as benzoyl, substituted benzoyl, naphthylcarbonyl and substituted naphthylcarbonyl groups are preferred. Examples of the group substitutable for the benzoyl or naphthylcarbonyl group include alkyl, alkoxy, halogen, amino, hydroxy and alkanoyloxy groups.

As the substituted or unsubstituted hydrocarbon group represented by R⁶ or R⁷, those exemplified above as R¹, R² or R⁴ can be mentioned.

As the heterocyclic group represented by R⁷, 5- to 14-membered monocyclic or fused ring groups each having 1 to 3 hetero atoms such as nitrogen, oxygen and/or sulfur are preferred. Specific examples include pyridyl, pyridazinyl, furyl, thienyl, indolyl, thiazolyl, imidazolyl, benzofuryl, benzothienyl, pyrrolidinyl, piperidinyl, morpholinyl and piperazinyl groups. Examples of the group substitutable for these heterocyclic groups include halogen atoms, hydroxyl group, alkoxyl groups, acyl groups and protected or unprotected amino groups. As the specific examples of these substituents, those exemplified above as the substituent for the hydrocarbon group of R¹, R² or R⁴ can be mentioned.

Examples of the alkoxycarbonyl group represented by R⁷ include C₁₋₁₂ alkoxycarbonyl groups, more specifically, methoxycarbonyl, ethoxycarbonyl, isopropoxycarbonyl and butoxycarbonyl groups.

5 These mercaptopropionic amide derivatives can be prepared, for example, in accordance with the process as described in Japanese Patent Application Laid-Open No. SHO 57-24354.

10 The following are the typical compounds of the above-described phosphonic acid derivatives and mercaptopropionic amide derivatives.

Compound 1

Compound 2

Compound 3

Compound 4

5 Compound 5

Compound 6

Compound 7

In the present invention, the ginger rhizome
(*Zingiberis Rhizoma*) means an underground stem of ginger
(*Zingiber officinale* Roscoe) of the family *Zingiberaceae*;
the hydrolyzed almond means a mixture available by
hydrolyzing, in the presence of an acid or alkali, the seed
(sweet seed) of almond (*Prunus amygdalus* Batsch) of the
family *Rosaceae*, the clove means a bud of a clove (*Syzygium*
aromaticum Merrill et Perry (*Eugenia caryophyllata*
Thunberg)), the rose hip means a fruit of a wild rose (*Rosa*
multiflora Thunberg) of the family *Rosaceae* or plants
analogous thereto, the hawthorn means a terrestrial part of
a hawthorn (*Craegus oxyacantha* L.) of the family *Rosaceae*,
the white birch means a leave, bark, or wood part of
European birch (*Betula alba* L.) of the family *Butulaceae*,
and the gambir means a dried and solidified aqueous extract
prepared from the leaves or young twigs of *Uncaria gambir*
Roxburgh of the family *Rubiaceae*. These plants have
conventionally been used as a crude drug or food and are
excellent in safety.

10057944-020002
The term "plant extract" as used herein, except the hydrolyzed almond, means a solvent extract available by extracting the above-described plant in the pulverized form with a solvent at room temperature or under heating, or
5 extracting by an extractor such as Soxhlet extractor; or a diluted solution, concentrate or dry powder thereof.

In the present invention, it is possible to use plants as are or after extraction, steam distillation or pressing. Examples of the solvent usable for extraction include
10 water, alcohols such as methanol, ethanol, propanol and butanol, polyhydric alcohols such as propylene glycol and butylene glycol, ketones such as acetone and methyl ethyl ketone, esters such as methyl acetate and ethyl acetate, linear or cyclic ethers such as tetrahydrofuran and diethyl
15 ether, halogenated hydrocarbons such as dichloromethane, hydrocarbons such as hexane, cyclohexane and petroleum ether, aromatic hydrocarbons such as toluene, polyethers such as polyethylene glycol and pyridines. They may be used either singly or in combination.

20 On the other hand, the hydrolyzed almond can be obtained, for example, by adding 0.1 to 20 vol.% of an acid such as sulfuric acid, hydrochloric acid, acetic acid or phosphoric acid or 0.01 to 10N alkali such as sodium hydroxide or potassium hydroxide to a solvent such as
25 water, ethanol, propanol, butanol, propylene glycol or 1,3-butylene glycol, preferably water or ethanol, dipping an

almond in the resulting mixture usually at 3 to 100°C and then removing an insoluble matter. The insoluble matter is preferably removed after adjustment of the pH to about 7.0 with an alkali such as sodium hydroxide, potassium hydroxide, sodium carbonate or sodium bicarbonate, or an acid such as sulfuric acid, hydrochloric acid, acetic acid or phosphoric acid. As the solvent, a mixture of at least two solvents may be used.

The above-described extracts can be used after removing therefrom inactive impurities by a technique such as liquid-liquid partition or solvent-adding precipitation and if necessary, subjecting the residue to deodorization or decoloring in a known manner. Moreover, it is possible to use the extracts as a more active fraction obtained by fractionation through suitable separating means such as gel filtration, chromatography or precision distillation.

Neutral endopipetidase is an enzyme for decomposing opioid peptides such as enkephalins or neuropeptides such as substance P and bradykinin. Although the inhibitor against this enzyme is known to be useful as a substitute for a morphine type substance, that is, as an analgesic, there is no report suggesting the relation between the activity of this enzyme and growth of the body hair.

As the neutral endopeptidase inhibitor to be used in the present invention, a dermal-fibroblast-derived neutral endopeptidase inhibitor is preferred. Examples of such an

inhibitor include substances each exhibiting at least 50% inhibitory activity in the concentration of 1 mM in an enzymatic activity measuring system obtained by adding, to an MES buffer (100 mM, pH 6.5) added with sodium chloride (300 mM), an enzyme solution extracted from the cultured human fibroblast with a 0.1 Triton X-100/0.2 M tris-HCl buffer (pH 8.0) and glutaryl-Ala-Ala-Phe-4-methoxy-2-naphthylamine as a substrate.

Examples of the neutral endopeptidase inhibitor include the compounds represented by the following formulas (a) to (g).

(a) Malonic amide derivatives represented by the formula (a) and salts thereof:

[wherein, R⁸ represents a hydrogen atom, an alkyl group, an alkenyl group or an aralkyl group;

R⁹ represents a hydrogen atom or a substituted or unsubstituted alkyl, alkenyl or aralkyl group,

R¹⁰ represents a hydrogen atom, an alkyl group or an alkenyl group, or may be coupled with R¹¹ to form a heterocycle with the adjacent nitrogen atom,

R¹¹ represents a hydrogen atom, or a substituted or unsubstituted alkyl, alkenyl or aralkyl group, or may be

coupled with R¹⁰ to form the above-described heterocycle,

R¹² represents a hydroxyl group, an alkoxy group, an alkenyloxy group or an amino acid residue, and

p stands for an integer of 0 to 5].

5 (b) Hydroxamic acid derivatives represented by the formula (b) and salts thereof (Japanese Patent Application Laid-Open No. Sho 58-77852)

10 (wherein, Ar¹ represents a substituted or unsubstituted phenyl group, R¹³ represents a hydrogen atom, an alkyl group or a methylthioalkyl group, and Z represents a hydroxy, alkoxy, aralkyloxy, phenoxy, amino, alkylamino or dialkylamino group).

15 (c) Mercaptopropionylamide derivatives represented by the formula (c) and salts thereof (Japanese Patent Application Laid-Open No. Sho 60-1366554)

20 (wherein, R¹⁴ represents a hydrogen atom or an acyl group, R¹⁵ represents an aralkyl or heteroaralkyl group, R¹⁶ represents a hydrogen atom or an alkyl, aralkyl or heteroaralkyl group, R¹⁷ represents a hydroxy, alkoxy,

aralkyloxy, heteroaralkyloxy, amino, alkylamino or dialkylamino group and m stands for 1 to 15).

(d) N-substituted butylamide derivatives represented by the formula (d) and salts thereof (Japanese Patent Application Laid-Open No. Sho 61-502468).

(wherein, A and B each independently represents a hydroxymethyl, carboxyl, esterified carboxyl, carbamoyl or N-substituted carbamoyl group, R^{18} and R^{19} each independently represents an alkyl, aryl, heteroaryl or aralkyl group and Y represents a substituted or unsubstituted alkylene group).

(e) Hydroxamic acid derivatives represented by the formula (e) and salts thereof (Japanese Patent Application Laid-Open No. Sho 63-101353)

(wherein, R^{20} represents a hydrogen atom or an acyl group, R^{21} and R^{23} each independently represents a hydrogen atom, an alkyl group or an aralkyl group, R^{22} represents CONH or NHCO, R^{24} represents a hydrogen atom or an amino group and R^{25} represents a hydroxy, alkoxy, amino or N-substituted amino group).

(f) Dipeptides represented by the formula (f):

[wherein, R^{26} represents a hydrogen atom or an alkyl group or may be coupled with R^{27} to form a heterocycle together with the adjacent nitrogen atom,

R^{27} represents a hydrogen atom or a substituted or unsubstituted alkyl or aralkyl group, or may be coupled with R^{26} to form the above-described heterocycle,

R^{28} represents a hydrogen atom or an alkyl, alkenyl or aralkyl group, and

l stands for an integer of 0 to 4].

(g) Dipeptides represented by the formula (g):

(wherein, R^{29} and R^{30} each independently represents a hydrogen atom or an alkyl or aralkyl group).

In the above-described formulas (a) to (g), the alkyl part of the alkyl, alkoxy, alkyloxy or methylthioalkyl group preferably has 1 to 6 carbon atoms. As the aralkyl

group, phenyl(C₁₋₆ alkyl) groups are preferred. As the heteroaralkyl group, heteroaryl(C₁₋₆ alkyl) groups are preferred, with pyridyl(C₁₋₆ alkyl), pyrimidinyl(C₁₋₆ alkyl) and purine(C₁₋₆ alkyl) groups being particularly preferred.

5 As the alkylene group, those having 1 to 8 carbon atoms are preferred.

As the aryl group, phenyl and naphthyl groups are preferred. As the aralkyloxy group, phenyl((C₁₋₆ alkyl) groups are preferred. As the heteroaralkyloxy group, 10 heteroaryl(C₁₋₆ alkyl)oxy groups are preferred, with pyridyl(C₁₋₆ alkyl)oxy, pyrimidinyl(C₁₋₆ alkyl)oxy and purine(C₁₋₆ alkyl)oxy groups being particularly preferred. As the alkenyl group, those having 2 to 6 carbon atoms are preferred. Examples of the substituent for the alkyl, 15 aralkyl or phenyl group include carboxyl group, halogen atoms and alkoxy groups. Examples of the heterocycle formed by R¹⁰ and R¹¹ or R²⁶ and R²⁷ include pyrrolidine and piperidine rings.

Among them, the malonic acid amide derivatives of the 20 formula (a) and dipeptides of each of the formula (f) and (g) are particularly preferred.

As the alkyl or alkenyl group in R⁸ or R¹⁰ of the formula (a), those having 1 to 8 carbon atoms are preferred, of which those having 1 to 4 carbon atoms are 25 particularly preferred and alkyl groups having 1 to 4

carbon atoms are more preferred. Among them, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl and t-butyl groups are particularly preferred. Examples of the aralkyl group include phenylalkyl, biphenylalkyl and naphthylalkyl groups, of which the phenyl(C₁₋₆ alkyl) groups, particularly benzyl group, are preferred.

As R⁸, a hydrogen atom, C₁₋₈ alkyl groups and phenyl(C₁₋₆ alkyl) groups are particularly preferred.

As R¹⁰, a hydrogen atom is most preferred.

As R⁹ or R¹¹, a hydrogen atom, linear or branched C₁₋₁₂ alkyl or alkenyl groups and aralkyl groups are preferred, of which the hydrogen atom and linear or branched C₃₋₆ alkyl or alkenyl groups are more preferred, and the hydrogen atom, n-propyl group, isopropyl group, isobutyl group and tert-butyl group are particularly preferred. Examples of the aralkyl group include phenylalkyl and naphthylalkyl groups, of which the phenyl(C₁₋₆ alkyl) groups are preferred, with the benzyl and phenetyl groups being more preferred.

Examples of the heterocycle formed by R¹⁰ and R¹¹ include pyrrolidine and piperidine rings, of which the pyrrolidine ring is preferred.

As the alkoxy or alkenyloxy group in R¹², alkoxy or alkenyloxy groups having 1 to 8, particularly 1 to 4 carbon atoms are preferred, with the C₁₋₄ alkoxy groups being more

preferred. Examples of the amino acid residue include essential amino acid residues. The amino group of this amino acid forms an amide bond with the carbonyl group in the formula (1). As R^{12} , a hydroxyl group and C_{1-4} alkoxy groups are preferred, with hydroxyl, methoxy, ethoxy, n-propyloxy, isopropyloxy, n-butyloxy, isobutyloxy and t-butyloxy groups being particularly preferred.

As p, 0 or 1 is most preferred.

In the formula (f), a hydrogen atom is preferred as R^{26} . As R^{27} , a hydrogen atom and methyl, isopropyl, isobutyl, t-butyl, benzyl, phenethyl, carboxymethyl and carboxyethyl groups are preferred. As R^{28} , a hydrogen atom and methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl and benzyl groups are preferred. As l, 0, 1 or 2 is preferred.

In the formula (g), R^{29} preferably represents a hydrogen atom, while R^{30} preferably represents a hydrogen atom or a methyl group.

Examples of the salts of the compounds of the formulas (a) to (g) include alkali metal salts, alkaline earth metal salts, amine salts, amino acid salts and acid addition salts. Preferred are alkali metal salts and amino acid salts. The compounds of the formulas (a) to (g) may have optical activity. Their steric configuration may be any one of R, S or racemic form, or they may be in a hydrated form.

Among the compounds represented by the formula (a), particularly preferred are as follows:

Compound 8

5 Compound 9

Compound 10

Compound 11

Compound 12

Compound 13

5 The compound represented by the formula (a) can be synthesized, for example, in accordance with the process of Nakano, et al. (Chem. Lett., 505-8(1990)) represented by the following reaction scheme:

10 (R^8 to R^{12} and p have the same meanings as described above).

The target compound is obtained by reacting the

malonic acid half ester (h) with the amino acid ester (i) in the presence of a dehydrating condensation agent and optionally reacting the resulting mixture with a base such as sodium hydroxide.

5 The compound represented by the formula (a) can also be synthesized in accordance with the below-described process of Katsuki, et al. (Bull. Chem. Soc. Jpn., 49, 3287-3290 (1976)).

10 (wherein R⁸ to R¹² and p have the same meanings as described above).

Described specifically, the target compound is obtained by reacting the malonic acid half ester acid chloride (j) with the amino acid ester (i) in the presence of a base and optionally alkylating the resulting mixture with an alkyl halide or hydrolyzing it with a base such as sodium hydroxide.

15

Examples of the dipeptide represented by the formula
(f) include Phe-Gly, Phe- β -Ala, Phe-Phe, Phe-Leu, Phe-Ala
and Phe-Asp. They can be synthesized, for example, by the
process as described in K. Ienaga, K. Higashihara and H.
5 Kimura, Chem. Pharma. Bull., 35, 1249-1254(1987). Examples
of the dipeptide represented by the formula (7) include
Asp-Phe-OMe (aspartame) and Asp-Phe. As the compound of
the formula (f) or (g), commercially available one can also
be used.

10 From the viewpoints of hair growth inhibitory effects
and economy, the dermatologic external composition of the
present invention usually contains the elastase inhibitor
and/or neutral endopeptidase inhibitor in an amount of
0.00001 to 40 wt.%, particularly 0.0001 to 10 wt.%. If
15 this component is an extract or the like, the above-
described amount is in terms of dry solid powder.

The dermatologic composition for external use
according to the present invention, which contains the
components (A) and (B), further contains (C) at least one
20 proteolytic enzyme selected from papain, trypsin,
chymotrypsin, pepsin, bromelain, ficin and pancreatin.

The dermatologic composition for external use, which
contains the component (B) and the above-described
component (C), also has excellent hair growth inhibitory
25 effects.

It is usually preferred to adjust the content of the

proteolytic enzyme (component (C)) in the dermatologic external composition of the present invention to 0.00001 to 10 wt.%, particularly 0.0001 to 3 wt.% from the viewpoints of the hair growth inhibitory effects and economy.

5 The weight ratio of the component (B) to the component (C) in the composition of the present invention depends on the nature of them, but the (B):(C) weight ratio preferably falls within a range of from 10:1 to 1:20, particularly 1:1 to 1:2, from the viewpoint of the hair growth inhibitory effects.

10 The composition of the present invention can be prepared by mixing the components (B) and (C) in a conventional manner but it is possible to mix them after enclose them in a liposome to heighten the percutaneous absorption. Liposome can be prepared, for example, by a
15 known manner with a phospholipid such as lecithin as a material ("Biomembrane", written by Robert B Gennis, pp.74-77, Springer Verlag Tokyo Co., Ltd. (1990)).

20 To the composition for inhibiting hair growth or dermatologic external composition according to the present invention, a keratolytic or a component having hair-growth controlling or depilatory action such as thioglycolic acid or a salt thereof can be added as needed, in addition to the above-described component. Examples of the keratolytic
25 include lactic acid, bioprase, salicylic acid, glycolic acid, citric acid, malic acid, sulfur, resorcin,

thioxolone, selenium disulfide and urea. Examples of the salt of thioglycolic acid include not only sodium salt, potassium salt, calcium salt and ammonium salt but also alkanolamine salts such as monoethanolamine, diethanolamine and triethanolamine. Calcium thioglycolate is particularly preferred. Each of these keratolytics, or thioglycolic acid or salts thereof is preferably added in an amount of 0.01 to 10 wt.%, particularly 0.05 to 5%.

In the composition of the present invention, various desired components usually employed for cosmetics, quasi-drugs or drugs are incorporated within a range not impairing the effects of the present invention. Examples of such desired components include purified water, ethanol, oil components, humectants, thickeners, antiseptics, emulsifiers, drug efficacy ingredients, powders, ultraviolet absorbers, colorants, perfumes and emulsion stabilizers. Use of the dermatologic external composition according to the present invention as a cosmetic composition, particularly, hair-growth-inhibitory cosmetic composition is preferred.

Examples of the oil component include liquid paraffin, vaseline, paraffin wax, squalane, bees wax, carnauba wax, olive oil, lanolin, higher alcohols, fatty acids, synthetic ester oils between a higher alcohol and fatty acid and silicone oil. Examples of the humectant include sorbitol, xylitol, glycerin, maltitol, propylene glycol, 1,3-butylene

glycol, 1,4-butylene glycol, sodium pyrrolidonecarboxylate,
lactic acid, sodium lactate, polyoxypropylene fatty acid
ester and polyethylene glycol. Examples of the thickener
include water-soluble polymers such as carboxyvinyl
polymer, carboxymethyl cellulose, polyvinyl alcohol,
carrageenan and gelatin, and electrolytes such as sodium
chloride and potassium chloride. Examples of the
antiseptic include urea, methyl paraben, ethyl paraben,
propyl paraben, butyl paraben and sodium benzoate. Those
of the emulsifier include nonionic surfactants such as
polyoxyethylene alkyl ether, polyoxyethylene fatty acid
ester, polyoxyethylene sorbitan fatty acid ester, glycerin
fatty acid ester, polyglycerin fatty acid ester,
polyoxyethylene glycerin fatty acid ester, polyoxyethylene
hydrogenated castor oil and polyoxyethylene sorbitol fatty
acid ester. Illustrative of the powder include talc,
sericite, mica, kaolin, silica, bentonite, vermiculite,
zinc powder, mica, mica titanium, titanium oxide, magnesium
oxide, zirconium oxide, barium sulfate, red oxide, iron
oxide and ultramarine.

The compositions of the present invention have
excellent hair growth inhibitory effects and have a high
degree of safety for human body.

Examples

The present invention will hereinafter be described

more specifically by Examples. It should however be borne in mind that the present invention is not limited to or by these examples. The amount of a plant extract is indicated as a dry solids content.

5 Preparation Example 1: Preparation of a *Juniperus* extract

The raw leaves of *Juniperus virginiana* L. (the family *Juniperus* of *Cupressaceae*) of American growth were dipped in 45% ethanol for 3 to 5 days for extraction. The supernatant was filtered to obtain the extract of *Juniperus*
10 *virginiana* L. The resulting extract was found to have a specific gravity as measured at 25°C of $0.93 \pm 5\%$ and a solid concentration of 1.24%.

Preparation Example 2: Preparation of a *Juniperus communis* extract

15 A raw fruit of *Juniperus communis* (the family *Juniperus* of *Cupressaceae*) was dipped in 50% ethanol for 3 to 5 days for extraction. The supernatant was filtered to obtain the extract of *Juniperus communis*. The resulting extract was found to have a solid concentration of 1.5%.

20 Preparation Example 3: Preparation of a malt extract

The raw malt of *Gramineae* wheat (*Triticum aestivum* L.) of American growth was dipped in 42% ethanol for 3 to 5 days. The supernatant was filtered to obtain the malt extract. The resulting extract was found to have a
25 specific gravity as measured at 25°C of $0.94 \pm 5\%$ and a

solid concentration of 2.71%.

Preparation Example 4: Preparation of a ginger rhizome extract

A ginger rhizome was sliced. To 50 g of the sliced
5 ginger rhizome, 500 mL of 50% ethanol was added to dip the
former in the latter, followed by filtration, whereby the
ginger rhizome extract solution was obtained. The
resulting extract solution was concentrated. As a result,
the solid content was found to be 2.59 g, meaning that the
10 extract solution had the solid concentration of 0.52%.

Preparation Example 5: Preparation of a hydrolyzed almond extract

The pulverized almond (50 g) was extracted under
heating (60°C for 2 hours) with 200 mL of 0.1 mol/L
15 sulfuric acid. The mixture was then allowed to cool down
and filtered, whereby the extract solution was obtained.
After neutralization of the resulting extract solution with
0.2 mol/L sodium hydroxide, it was diluted with distilled
water, whereby 500 g of the hydrolyzed almond extract
20 solution was obtained. The evaporation residue was found
to be 5.2 g.

Preparation Example 6: Preparation of a burnet extract

The burnet was sliced. To 50 g of the sliced burnet,
500 mL of water was added to dip the former in the latter,
25 followed by filtration, whereby the burnet extract solution
was obtained. As a result of concentration, the solid

content was found to be 2.68 g, meaning that the extract solution had a solid concentration of 0.54%.

Preparation Example 7: Preparation of a clove extract

The clove was sliced. To 50 g of the sliced clove,
5 500 mL of 95% ethanol was added to dip the former in the latter, followed by filtration, whereby a clove extract solution was obtained. As a result of concentration, the solid content was found to be 1.46 g, meaning that the extract solution had a solid concentration of 0.29%.

10 Preparation Example 8: Preparation of a rose hip extract

The rose hip was sliced. To 50 g of the sliced rose hip, 500 mL of water was added to dip the former in the latter, followed by filtration, whereby a rose hip extract solution was obtained. As a result of concentration, the
15 solid content was found to be 2.28g, meaning that the extract solution had a solid concentration of 0.46%.

Preparation Example 9: Preparation of a hawthorn extract

The hawthorn was sliced. To 50 g of the sliced hawthorn was added 500 mL of 50% ethanol to dip the former
20 in the latter, followed by filtration, whereby a hawthorn extract solution was obtained. As a result of concentration, the solid content was found to be 3.09 g, meaning that the extract solution had a solid concentration of 0.62%.

25 Preparation Example 10: Preparation of a white birch extract

10067944-300000
The white birch was sliced. To 50 g of the sliced birch was added 500 mL of 50% ethanol to dip the former in the latter, followed by filtration, whereby a white birch extract solution was obtained. As a result of concentration, the solid content was found to be 3.13 g, meaning that the extract solution had a solid concentration of 0.63%.

Preparation Example 11: Preparation of a gambir extract

The gambir was sliced. To 5 g of the sliced gambir was added 100 mL of ethanol to dip the former in the latter, followed by filtration, whereby a gambir extract solution was obtained. As a result of concentration, the solid content was found to be 2.51 g, meaning that the extract solution had a solid concentration of 2.51%.

[Synthesis Example 1] Synthesis of Compound 8

In 50 mL of chloroform were dissolved 16.05 g (114 mmol) of glycine ethyl ester hydrochloride and 23.27 g (228 mmol) of triethylamine, followed by ice cooling to 5°C. Without changing the temperature, 10.00 g (57 mmol) of ethylmalonic chloride was added dropwise to the resulting solution. After completion of the dropwise addition, the disappearance of the raw material was confirmed by thin layer chromatography and a 5% aqueous phosphoric acid solution was added to terminate the reaction. The organic layer was washed with distilled water and saturated saline, dried over anhydrous sodium sulfate and then distilled to

remove the solvent. The residue was subjected to column chromatography and eluted with a mixed solvent of ethyl acetate and n-hexane. The solvent was then distilled off, whereby 9.40 g (yield: 76%) of Compound 1 was obtained.

5 NMR (DMSO- d_6) δ : 2.48-2.51 (m, 6H), 3.30 (d, 2H, $J=9\text{Hz}$),
3.85 (d, 2H, $J=6\text{Hz}$), 4.02-4.20 (m, 4H), 8.49 (t, 1H, $J=5\text{Hz}$).

[Synthesis Example 2] Synthesis of Compound 9

In 50 mL of dehydrated tetrahydrofuran was dissolved 5.00 g (23.0 mmol) of Compound 1. The resulting solution
10 was added to a suspension of 1.10 g (27.6 mmol) of sodium hydride in 30 mL of tetrahydrofuran, followed by heating to 50°C. Benzyl bromide (3.74 g, 21.9 mmol) was slowly added dropwise and at the same temperature, stirring was conducted for 3 hours. Then, the reaction was terminated.
15 After cooling, a 5% aqueous phosphoric acid solution was added and the resulting mixture was extracted with 300 mL of ethyl acetate. The organic layer was washed with a saturated aqueous solution of sodium bicarbonate and saturated saline, dried over anhydrous sodium sulfate and
20 then distilled to remove the solvent. The residue was subjected to column chromatography and eluted with a mixed solvent of ethyl acetate and n-hexane. The solvent was then distilled off, whereby 3.89 g (yield: 55%) of Compound 2 was obtained.

25 NMR (DMSO- d_6) δ : 1.16 (t, 1H, $J=7\text{Hz}$), 2.93-3.19 (m, 2H),

3.71 (t, 1H, J=7Hz), 3.80 (d, 2H, J=6Hz), 4.06 (q, 4H, J=7Hz), 7.13-7.29 (m, 5H), 8.61 (t, 1H, J=6H).

[Synthesis Example 3] Synthesis of Compound 10

In 30 mL of methanol was dissolved 3.00 g (9.8 mmol) of Compound 2, followed by the addition of a solution of 1.20 g (21.5 mmol) of potassium hydroxide (KOH) in 10 mL of water. The resulting mixture was stirred at room temperature for 2 hours and then, the reaction was terminated. After removal of methanol by distillation under reduced pressure, a 5% aqueous phosphoric acid solution was added to the residue and the crystals thus precipitated were collected by filtration. The resulting crystals were washed with water and then dried under reduced pressure, whereby 2.17 g (yield: 88%) of Compound 2 was obtained.

NMR (DMSO-d₆) δ: 2.90 (m, 2H), 3.59 (t, 1H, J=7Hz), 3.74 (d, 2H, J=6Hz), 7.12-7.32 (m, 5H), 8.37 (t, 1H, J=6Hz), 12.49 (br.s, 2H).

[Synthesis Examples 4 to 6]

Compounds 11 to 13 were synthesized in a similar manner to Synthesis Examples 1 to 3 by using the amino acid ester and alkyl halide as shown in Table 1.

Table 1

Synthesis Example	Synthesis process	Amino acid ester	Alkyl halide	Yield	NMR
4	2	-	Bromo-biphenyl-methane	61%	DMSO-d ₆ 1.14-1.25(m,6H), 2.99-3.20(m,2H), 3.77(t,1H,J=8Hz), 3.87(d,2H,J=8Hz), 3.98-4.19(m,4H), 7.24-7.65(m,9H), 8.63(t,1H,J=5Hz)
5	1,2,3	β -alanine methyl ester hydrochloride	Benzyl bromide	55%	DMSO-d ₆ 2.15-2.39(m,2H), 2.90-3.09(m,2H), 3.10-3.34(m,2H), 3.54(t,1H,J=8Hz), 7.00-7.35(m,5H), 8.11(t,1H,J=5Hz), 12.38(br.s,2H)
6	1,3	L-phenylalanine methyl ester hydrochloride	-	68%	DMSO-d ₆ 2.84-3.10(m,2H), 3.17(s,2H), 4.42-4.53(m,1H), 7.09-7.35(m,5H), 8.35(d,1H,J=8Hz), 12.24(br.s,2H)

Test 1

Inhibition test on neutral endopeptidase activity of
cultivated human fibroblast

Normal human fibroblast commercially available from Dainippon Pharmaceutical Co., Ltd. was subcultured on a DME medium containing 10% bovine fetal serum and provided for the present test. The cells peeled by a rubber-policeman from a Petri dish were floated in a phosphate-buffered physiological saline, collected by a low-velocity centrifuge, and washed three times with the same physiological saline. The cells were floated in a 0.1% Triton X-100/0.2M tris-HCl buffer (pH 8.0), followed by

ultrasonic pulverization, whereby an enzyme solution was obtained.

The enzyme activity was measured as follows: To 100 μ L of an MES buffer (100 mM, pH 6.5) added with sodium chloride (300 mM), were added 2 μ L of the enzyme solution, 1 μ L of a solution of the invention compound and, as a substrate for the measurement of enzyme activity, 1 μ L of 20 mM glutaryl-Ala-Ala-Phe-4-methoxy-2-naphthylamine, followed by reaction at 37°C for 1 hour. Phosphoramidon was added to the reaction mixture to give its final concentration of 0.4 μ M and then, the reaction was terminated. Aminopeptidase M having a final concentration of 20 mU was added to the reaction mixture and the resulting mixture were reacted at 37°C for 15 minutes. The amount of the resulting 4-methoxy-2-naphthylamine was determined by measuring the fluorescent strength at excited wavelength of 340 nm and fluorescent wavelength of 425 nm by a fluorospectrophotometer and % inhibition of the compound against enzyme activity was determined. Results are shown in Table 2.

Table 2

Test substance	Concentration	% inhibition
Compound 8	1 mM	23.8 \pm 2.7
Compound 9	0.1 mM	74.5 \pm 9.3
Compound 10	0.1 mM	91.2 \pm 3.7
Compound 11	0.1 mM	85.7 \pm 2.2
Compound 12	0.1 mM	69.5 \pm 4.3
Compound 13	1 mM	49.3 \pm 1.2
Phe-Gly	1 mM	49.4
Phe- β -Ala	0.1 mM	92.6
Phe-Phe	1 mM	85.7
Phe-Leu	1 mM	72.9
Phe-Ala	1 mM	75.3
Phe-Asp	1 mM	85.4
Aspartame	1 mM	30.2
Asp-Phe	1 mM	45.7

Example 1: Hair growth test (1) using mice

Each of the test substances was dissolved or suspended in an extraction solvent to give a concentration as shown in Table 3, whereby the corresponding hair growth inhibitor was prepared. The back of each of 49-day-old C3H/HeNCrj mice (one group consisting of 20 mice) was shaved by 2 x 4 cm² by electric clippers and an electric shaver so as not to injure its skin. From the next day, the inhibitor was applied by 20 μ L/once/day to the shaved portion for 4 weeks, while only the solvent was applied to a control group. In order to observe hair regrowth, the picture of the shaved portion was taken at a fixed magnification and the day-dependent change of the area ratio of the regrowth hair (regrowth hair area/shaved area) was measured by an image analyzer.

As a result, apparent from Table 3, it has been found that the composition of the present invention exhibited excellent hair growth inhibitory action.

Test 3

Test substance	Concentration (dry solids content)	Hair growth inhibition ratio (%) 3 weeks after depilation
Malt extract	0.136%	48.6
<i>Juniperus virginiana</i> L. extract	0.062%	36.1
<i>Juniperus communis</i> extract	0.075%	30.5
Burnet extract	0.270%	58.5
Malt extract + burnet extract	0.136% + 0.270%	72.3
<i>Juniperus virginiana</i> L. extract + burnet extract	0.062% + 0.270%	63.9
Malt extract + <i>Juniperus virginiana</i> L. extract + burnet extract	0.136% + 0.062% + 0.270%	82.4

Example 2: Hair growth test (2) using mice

(1) Preparation of a test sample

Component (B):

Each of Compounds 1 to 3 and 7 was dissolved in a 50% ethanol solution, whereby a 1 mM solution was prepared.

Compound (C):

Papain powder (produced by CALBIOCHEM-NOVABIOCHEM CORPORATION) was dissolved in purified water to prepare a 2% aqueous solution, followed by the addition of an equal amount of ethanol to prepare a 1% ethanol solution.

Trypsin powder (produced by Sigma Aldrich Corporation) was dissolved in Hanks' Balanced Salt Solution (produced by Gibco BRL) having 1 mM EDTA-4Na dissolved therein, followed by the addition of an equal amount of ethanol to prepare a

1% ethanol solution.

Chymotrypsin powder (produced by Sigma Aldrich Corporation) was treated in a manner similar to that employed for trypsin, whereby a 1% ethanol solution was prepared.

The above-described components (B) and (C) were combined as shown in Table 4 as a test sample.

(2) Testing method

The back of 6-week-old C3H mice (each group consisting of 5 mice) was shaved by 2 x 4 cm² by electric hair clippers or an electric shaver so as not to injure its skin. The sample was applied in an amount of 100 µL/once to the shaved portion twice a day for 4 weeks. To a control group, only a solvent was applied. Three weeks after depilation, the picture of the shaved portion was taken at a fixed magnification in order to observe the regrowth hair and the area of the hair regrowth (area of regrowth hair/shaved area) was compared with that of the control group by using an image analyzer. The results are shown in Table 4.

Table 4

Test sample	Concentration applied	Hair growth inhibition 3 weeks after depilation			
		Solvent	Papain 1%	Trypsin 1%	Chymotrypsin 1%
Solvent		0	17.3	25.6	20.1
Compound 1	1 mM	58.7	77.5	84.7	80.2
Compound 2	1 mM	59.1	80.3	-	-
Compound 3	1 mM	64.8	83.6	88.5	-
Compound 7	1 mM	59.7	77.9	-	-

As apparent from Table 4, the test sample containing the elastase inhibitor as the component (B) and proteolytic enzyme as the component (C) in combination exhibited excellent hair growth inhibiting effects.

Example 3: Hair growth inhibiting lotion

		(wt.%)
	(i) Polyoxyethylene hydrogenated castor oil	0.8
	Ethanol	30.0
10	(ii) Malt extract	0.1 (dry solids content)
	Sodium dodecyl sulfate	0.12
	Dodecyl methylamine oxide	0.18
	Isopropyl alcohol	15.0
	Benzyl alcohol	15.0
15	Glycerin	2.0
	Purified water	Balance

Components belonging to (i) and those belonging to (ii) were dissolved, respectively. To (i) was added (ii), followed by uniform mixing under stirring, whereby a hair growth inhibiting lotion was obtained.

Example 4: Hair growth inhibiting cream

		(wt.%)
	(i) Liquid paraffin	10.0
	Squalane	7.0
25	Jojoba oil	3.0
	Solid paraffin	3.0

	Polyoxyethylene cetyl ether	2.0
	Sorbitan sesquioleate	1.0
	Potassium hydroxide	0.1
	(ii) <i>Juniperus virginiana</i> L.	0.01 (dry solids content)
5	Glycerin	3.0
	Ethyl paraben	0.1
	Purified water	Balance

Components belonging to (i) and components belonging to (ii) were dissolved under heating, respectively. To (i) was added (ii), followed by uniform mixing under stirring. The resulting mixture was emulsified and cooled, whereby a hair growth inhibiting cream was obtained.

Example 5: Hair growth inhibiting foam

		(wt.%)
15	(i) Malt extract	0.1 (dry solids content)
	Cetanol	0.1
	Propylene glycol	2.0
	Dimethyl silicone oil	2.0
	Polyoxyethylene hydrogenated castor oil	2.5
20	Liquid paraffin	1.0
	Polyvinyl pyrrolidone	0.5
	Methyl paraben	0.2
	Ethanol	10.0
	Purified water	Balance
25	(ii) Liquefied petroleum gas (propellant)	4.0

After uniform mixing of the components belonging to

(i), the resulting mixture was filled in a container. The component (ii) was then filled in the container in a conventional manner, whereby a hair growth inhibiting foam was prepared.

Example 6: Aerosol

	(wt.%)
(i) <i>Juniperus virginiana</i> L.	0.01 (dry solids content)
Cetanol	1.2
Propylene glycol	4.0
Ethanol	8.0
Purified water	balance
(ii) Liquefied petroleum gas (propellant)	4.0

After uniform mixing of the components belonging to (i), the resulting mixture was filled in a container. The component (ii) was then filled in the container in a conventional manner, whereby an aerosol was prepared.

Example 7: Hair growth inhibiting lotion

The components belonging to (i) and the components belonging to (ii) were dissolved, respectively. To (i) was added (ii), followed by uniform mixing under stirring, whereby a hair growth inhibiting lotion was obtained.

	(wt.%)
(i) Polyoxyethylene hydrogenated castor oil	0.8
Ethanol	30.0
(ii) Compound 6	1.0
Papain	1.0

	Lactic acid	2.0
	Sodium dodecyl sulfate	0.12
	Dodecylmethylanine oxide	0.18
	Isopropyl alcohol	15.0
5	Benzyl alcohol	15.0
	Glycerin	2.0
	Purified water	Balance

Example 8: Hair growth inhibiting cream

The components belonging to (i) and the components
 10 belonging to (ii) were dissolved under heating,
 respectively. To (i) was added (ii), followed by uniform
 mixing under stirring. After emulsification, the emulsion
 was cooled, whereby a hair growth inhibiting cream was
 obtained.

15		(wt.%)
	(i) Liquid paraffin	10.0
	Squalane	7.0
	Jojoba oil	3.0
	Solid paraffin	3.0
20	Polyoxyethylene cetyl ether	2.0
	Sorbitan sesquioleate	1.0
	Potassium hydroxide	0.1
	(ii) Compound 7	1.0
	Trypsin enclosed in liposome	2.0
25	Glycolic acid	2.0
	Calcium thioglycolate	0.5

Glycerin	3.0
Ethyl paraben	0.1
Purified water	Balance

Example 9: Hair growth inhibiting foam

5 The components belonging to (i) were uniformly mixed and filled in a container. The container was then filled with (ii) in a conventional manner, whereby a hair growth inhibiting foam was prepared.

		(wt.%)
10	(i) Compound 5	1.0
	Chymotrypsin	1.0
	Salicylic acid	1.0
	Calcium thioglycolate	0.5
	Cetanol	0.1
15	Propylene glycol	2.0
	Dimethyl silicone oil	2.0
	Polyoxyethylene hydrogenated castor oil	2.5
	Liquid paraffin	1.0
	Polyvinyl pyrrolidone	0.5
20	Methyl paraben	0.2
	Ethanol	10.0
	Purified water	Balance
	(ii) Liquefied petroleum gas (propellant)	4.0
